#### SSI - BISS C **MAGNETIC SENSOR AGM-2**

**INTERPOLATION - SDE** 

### code **ST06** project **A48-C** release **A**

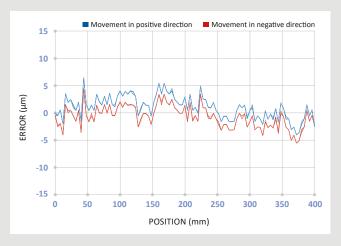

The following graphs show tests carried out in a metrological room under controlled climatic conditions: T= 20 °C ± 0.1 °C and R.H.= 45 ÷ 55%. The reference system for the comparison of position measurements is interferometric with 1 nm resolution and equipped with an environmental compensation device. The sensor is installed according to the recommended mechanical configuration at a distance of 0.5 mm from the magnetic band.

#### ACCURACY

Accuracy graph: deviation between the value measured by the sensor and the value measured by the reference system.

#### REPEATABILITY

Repeatability graph obtained by carrying out the measurements several times in both directions of advancement.

- Unidirectional repeatability: measurement error detected without inverting the movement direction of the sensor.
- Hysteresis: difference in the measure due to the inversion of the sensor movement direction.

Resolution

500 = 500 μm

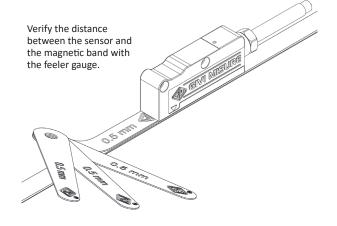

. 100 = 100 μm

= 1 µm 1

 $50 = 50 \,\mu m$  $10 = 10 \,\mu m$ - 5 μm 5

SDE (sub-division error) graph: accuracy of the interpolation device within the single pole pitch.

#### WARNING!

Make sure the tools used for assembly are rigorously demagnetized.

DO NOT TOUCH the cable terminals (or connector contacts) to avoid electrostatic discharges (ESD) on the device
